The Sun is a star about 93 million miles from Earth, and its light takes roughly 8 minutes and 20 seconds to reach us.

Jupiter is the largest planet in our solar system, and its Great Red Spot is a storm that has lasted for centuries.

Mercury is the closest planet to the Sun, and Neptune is the farthest.

Venus is the hottest planet, with surface temperatures around 465°C (870°F), because of its thick carbon dioxide atmosphere.

Saturn's rings are made mostly of ice particles and rocky debris.

Mars is called the Red Planet because iron oxide (rust) covers its surface.

A light-year is the distance light travels in one year, about 5.88 trillion miles.

The Moon orbits Earth about once every 27 days.

Yuri Gagarin became the first human in space on April 12, 1961.

Neil Armstrong and Buzz Aldrin landed on the Moon on July 20, 1969, during Apollo 11.
